

Document Title	Specification of PWM Driver
Document Owner	AUTOSAR
Document Responsibility	AUTOSAR
Document Identification No	037
Document Classification	Standard

Document Version	2.5.0
Document Status	Final
Part of Release	4.0
Revision	3

	Document Change History		
Date	Version	Changed by	Change Description
04.10.2011	2.5.0	AUTOSAR Administration	Re-formulated PWM045
29.10.2010	2.4.0	AUTOSAR Administration	 New Error symbol: PWM_E_PARAM_POINTER, shall be reported if API Pwm_GetVersionInfo service is called with a NULL parameter Updated the chapter Version Check Maintenance in phrasing and explaining
07.12.2009	2.3.0	AUTOSAR Administration	 The behavior of the function Pwm_SetPeriodAndDuty is explained in case of an input value of zero period. Added the chapter Debug Support Splitted some requirements so each ID is unique. Legal disclaimer revised
23.06.2008	2.2.1	AUTOSAR Administration	Legal disclaimer revised
20.12.2007	2.2.0	AUTOSAR Administration	 Tables generated from UML-models and UML-diagrams linked to UML-model General improvements of requirements in preparation of CT-development Reactivation concept for IDLE PWM channels adapted Development error in case of already initialized module added Document meta information extended Small layout adaptations made

	Document Change History		
Date	Version	Changed by	Change Description
30.01.2007	2.1.0	AUTOSAR Administration	 Updated file include structure Added configuration macros ON/OFF for PWM APIs Renamed configuration parameter PWM_PERIOD_UPDATED_ENDPERIO D to PwmPeriodUpdatedEndperiod Updated PWM signal description figure Legal disclaimer revised "Advice for users" revised "Revision Information" added
25.04.2006	2.0.0	AUTOSAR Administration	Document structure adapted to common Release 2.0 SWS Template. Modify abstraction level of PWM channel Notifications are configurable Update the configuration of the module
23.06.2005	1.0.0	AUTOSAR Administration	Initial Release

Advice for users

AUTOSAR Specification Documents may contain exemplary items (exemplary reference models, "use cases", and/or references to exemplary technical solutions, devices, processes or software).

Any such exemplary items are contained in the Specification Documents for illustration purposes only, and they themselves are not part of the AUTOSAR Standard. Neither their presence in such Specification Documents, nor any later documentation of AUTOSAR conformance of products actually implementing such exemplary items, imply that intellectual property rights covering such exemplary items are licensed under the same rules as applicable to the AUTOSAR Standard.

1 Introduction and functional overview

This specification specifies the functionality, API and the configuration of the AUTOSAR Basic Software module PWM driver.

Each PWM channel is linked to a hardware PWM which belongs to the microcontroller. The type of the PWM signal (for example center Align, left Align, Etc..) is not defined within this specification and is left up to the implementation.

The driver provides functions for initialization and control of the microcontroller internal PWM stage (pulse width modulation). The PWM module generates pulses with variable pulse width. It allows the selection of the duty cycle and the signal period time.

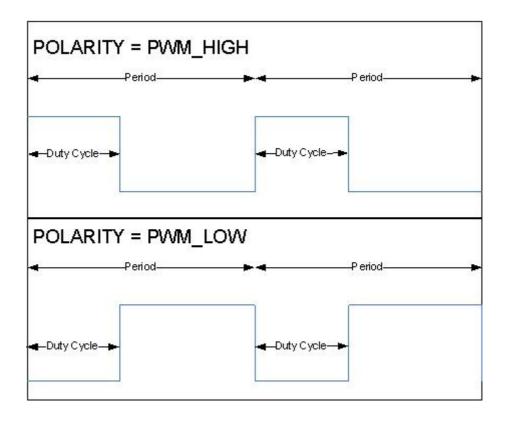

Figure 1: PWM signal description

2 Acronyms and abbreviations

Acronyms and abbreviations that have a local scope are not contained in the AUTOSAR glossary. These must appear in a local glossary.

Acronym: Description:	
PWM Channel	Numeric identifier linked to a hardware PWM.
PWM Output	Defines the output state for a PWM signal. It could be:
State	■ High.
	■ Low.
PWM Idle State	The idle state represents the output state of the PWM channel after the call of
	Pwm_SetOutputToldle or Pwm_DeInit
PWM Polarity	Defines the starting output state of each PWM channel
PWM Duty cycle	Defines a percentage of the starting level (could be high or low) related to the
	period.
PWM period	Defines the period of the PWM signal.

Abbreviation:	Description:
PWM	Pulse Width Modulation.
DEM	Diagnostic Event Manager.
DET	Development Error Tracer.
MCU	Microcontroller Unit.
PLL	Phase Locked Loop.
ISR	Interrupt Service Routine.

4 Constraints and assumptions

4.1 Limitations

[PWM001][The Pwm SWS does not cover PWM emulation on general purpose I/O.] (BSW12386)

4.2 Applicability to car domains

No restrictions.

5 Dependencies to other modules

The PWM depends on the system clock. Thus, changes of the system clock (e.g. PLL on \rightarrow PLL off) also affect the clock settings of the PWM hardware.

The PWM Driver depends on the following modules:

- PORT Driver: To set the port pin functionality. PWM141
- MCU Driver: To set prescaler, system clock and PLL. PWM142
- DET: Development Error Tracer in Development mode. PWM143

The document 087_AUTOSAR_ECU_Configuration contains a chapter 4.6 - *Clock Tree Configuration*, which details the mechanism to deliver reference clock signals to peripherals.

5.1 File structure

5.1.1 Code file structure

[PWM065] [The Pwm SWS shall not define the code file structure.] (BSW00380, BSW00346, BSW158, BSW00314, BSW00370)

5.1.2 Header file structure

[PWM075a] [Pwm.h shall include Pwm_Cfg.h.] ()

[PWM075b] [Pwm.h shall include Std_Types.h.] ()

[PWM075c] [Std_Types.h shall include Compiler.h and Platform_Types.h.] ()

[PWM075d] [Pwm_Lcfg.c shall include Pwm.h and Memmap.h.] ()

[PWM075e] [Pwm.c shall include Pwm.h, MemMap.h, Det.h and SchM_Pwm.h.] ()

[PWM075f] [Pwm_PBcfg.c shall include MemMap.h and Pwm.h.] ()

[PWM075g] [Pwm_Irq.c shall include MemMap.h and Pwm.h.] ()

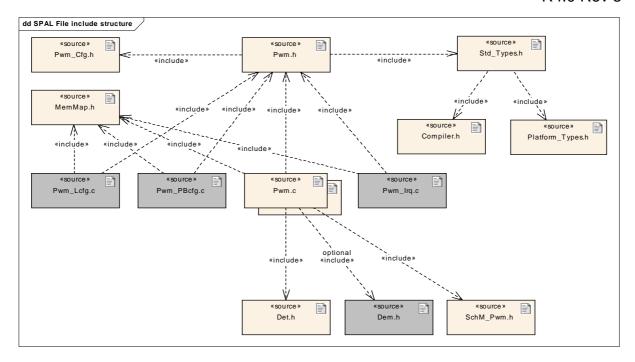

Figure 2: Header file structure

[PWM066a] [The PWM Driver module shall optionally include the Dem.h file if any production error will be issued by the implementation.] ()

[PWM066b] [The name of the Event Id symbols are implementation specific. | ()

[PWM066c] [The DEM configuration tool assigns ECU dependent values to the Event Id symbols and publishes the symbols in Dem_IntErrId.h.

By this inclusion the APIs to report errors as well as the required Event Id symbols are included. This specification defines the name of the Event Id symbols which are provided by XML to the DEM configuration tool. The DEM configuration tool assigns ECU dependent values to the Event Id symbols and publishes the symbols in Dem_IntErrId.h.] ()

7 Functional specification

7.1 General behavior

[PWM088] [All functions from the PWM module except Pwm_Init, Pwm_DeInit and Pwm_GetVersionInfo shall be re-entrant for different PWM channel numbers.

In order to keep a simple module implementation, no check of PWM088 must be performed by the module. | ()

[PWM089] [The Pwm module's user shall ensure the integrity if several function calls are made during run time in different tasks or ISRs for the same PWM channel. | ()

7.2 Time Unit Ticks

7.2.1 Background & Rationale

To get times out of register values it is necessary to know the oscillator frequency, prescalers and so on. Since these settings are made in MCU and/or in other modules it is not possible to calculate such times.

Hence the conversions between time and ticks shall be part of an upper layer.

7.2.2 Requirements

[PWM070] [All time units used within the API services of the PWM module shall be of the unit ticks.] (BSW00343)

7.3 Error classification

[PWM002a] [The PWM Driver module shall report the development error "PWM_E_PARAM_CONFIG (0x10)", when API Pwm_Init service is called with wrong parameter.] (BSW00337, BSW00385, BSW00386)

[PWM002b] [The PWM Driver module shall report the development error "PWM_E_UNINIT (0x11)", when API service is used without module initialization.] (BSW00337, BSW00385, BSW00386)

[PWM002c] [The PWM Driver module shall report the development error "PWM_E_PARAM_CHANNEL (0x12)", when API service is used with an invalid channel Identifier.] (BSW00337, BSW00385, BSW00386)

[PWM002d] [The PWM Driver module shall report the development error "PWM_E_PERIOD_UNCHANGEABLE (0x13)", on usage of unauthorized PWM service on PWM channel configured a fixed period.] (BSW00337, BSW00385, BSW00386)

[PWM002e] [The PWM Driver module shall report the development error "PWM_E_ALREADY_INITIALIZED(0x14)", when API Pwm_Init service is called while the PWM driver has already been initialized.] (BSW00337, BSW00385, BSW00386)

[PWM151] [The PWM Driver module shall report the development error "PWM_E_PARAM_POINTER (0x15)", when API Pwm_GetVersionInfo service is called with a NULL parameter.] ()

Type or error	Relevance	Related error code	Value [hex]
API Pwm_Init service called with wrong parameter	Development	PWM_E_PARAM_CONFIG	0x10
API service used without module initialization	Development	PWM_E_UNINIT	0x11
API service used with an invalid channel Identifier	Development	PWM_E_PARAM_CHANNEL	0x12
Usage of unauthorized PWM service on PWM channel configured a fixed period	Development	PWM_E_PERIOD_UNCHANGEABLE	0x13
API Pwm_Init service called while the PWM driver has already been initialised	Development	PWM_E_ALREADY_INITIALIZED	0x14
API Pwm_GetVersionInfo is called with a NULL parameter.	Development	PWM_E_PARAM_POINTER	0x15
	Production		Assigned externall y

To get more details concerning error detection, refer to chapter <u>API parameter</u> checking.

7.4 Error Detection

[PWM003a] [The detection of development errors is configurable (ON / OFF) at precompile time. The switch PwmDevErrorDetect shall activate or deactivate the detection of all development errors. | (BSW00338, BSW00369, BSW00386)

[PWM003b] [The switch PwmDevErrorDetect shall activate or deactivate the detection of all development errors.] (BSW00338, BSW00369, BSW00386)

[PWM064] [If the PwmDevErrorDetect switch is enabled, API parameter checking is enabled. The detailed description of the detected errors can be found in chapter

Error classification and chapter API specification. J (BSW00386)

[PWM006a] [Additional errors that are detected because of specific implementation shall be added in the PWM device specific implementation specification.] (BSW00339, BSW00421, BSW00422, BSW00420, BSW00386)

[PWM006b] [Additional errors that are detected because of hardware properties shall be added in the PWM device specific implementation specification.] (BSW00339, BSW00421, BSW00422, BSW00420, BSW00386)

7.5 Error Notification

[PWM078] [Detected development errors shall be reported to the <code>Det_ReportError</code> service of the Development Error Tracer (DET) if the pre-processor switch <code>PwmDevErrorDetect</code> is set.] ()

[PWM005] [Production errors shall be reported to Diagnostic Event Manager.] (BSW00339, BSW00421, BSW00422, BSW00420, BSW00386)

7.6 Duty Cycle Resolution and scaling

[PWM058] [The width of the duty cycle parameter is 16 Bits.] (BSW12383)

[PWM059] [The Pwm module shall comply with the following scaling scheme for the duty cycle:

- 0x0000 means 0%.
- 0x8000 means 100%. 0x8000 gives the highest resolution while allowing 100% duty cycle to be represented with a 16 bit value.

As an implementation guide, the following source code example is given:

AbsoluteDutyCycle =

((uint32)AbsolutePeriodTime * RelativeDutyCycle) >> 15;]
(BSW12459)

7.7 Version check

[PWM029] [The PWM module shall perform Inter Module Checks to avoid integration of incompatible files.

The imported included files shall be checked by preprocessing directives.

The following version numbers shall be verified:

- <MODULENAME>_AR_RELEASE_MAJOR_VERSION
- <MODULENAME>_AR_RELEASE_MINOR_VERSION

Where <MODULENAME> is the module short name of the other (external) modules which provide header files included by the PWM module.

If the values are not identical to the expected values, an error shall be reported. (BSW004)

7.8 Debug Support

[PWM145] [Each variable that shall be accessible by AUTOSAR Debugging, shall be defined as global variable.] ()

[PWM147] [All type definitions of variables which shall be debugged shall be accessible by the header file PWM.h.] ()

[PWM148] [The declaration of variables in the header file shall be such that it is possible to calculate the size of the variables by C-"sizeof".] ()

[PWM149] [Variables available for debugging shall be described in the respective Basic Software Module Description.] ()

8 API specification

8.1 Imported types

This chapter lists all types included from other modules.

[PWM094] [

Module	Imported Type
Dem	Dem_EventIdType
	Dem_EventStatusType
Std_Types	Std_ReturnType
	Std_VersionInfoType

] ()

8.2 Type definitions

8.2.1 Pwm_ChannelType

[PWM106] [

Name:	Pwm_ChannelType
Type:	uint
Range:	832 bit This is implementation specific but not all values may be valid within the type. This type shall be chosen in order to have the most efficient implementation on a specific microcontroller platform.
Description:	Numeric identifier of a PWM channel.

] ()

8.2.2 Pwm_PeriodType

[PWM107] [

Name:	Pwm_PeriodType
Туре:	uint
Range:	832 bit - Implementation specific. This type shall be chosen in orde to have the most efficient implementation on a specific microcontroller platform.
Description:	Definition of the period of a PWM channel.

1 ()

8.2.3 Pwm_OutputStateType

[PWM108] [

Name:	Pwm_OutputS	Pwm_OutputStateType	
Type:	Enumeration		
Range:	PWM_HIGH	PWM_HIGH The PWM channel is in high state.	
	PWM LOW	The PWM channel is in low state.	

Description:	Output state of a PWM channel.
•	

] ()

8.2.4 Pwm_EdgeNotificationType

[PWM109] [

Name:	Pwm_EdgeNotificationType	
Туре:	Enumeration	
Range:		cation will be called when a rising edge occurs on the output signal.
	PWM_FALLING_EDGE Notific	cation will be called when a falling edge occurs on the output signal.
		cation will be called when either a rising edge or falling occur on the PWM output signal.
Description:	Definition of the type of edg	e notification of a PWM channel.

] ()

8.2.5 Pwm_ChannelClassType

[PWM110] [

Name:	Pwm_ChannelClassType	
Туре:	Enumeration	
Range:		The PWM channel has a variable period. The duty cycle and the period can be changed.
		The PWM channel has a fixed period. Only the duty cycle can be changed.
		The PWM channel has a fixed shifted period. Impossible to change it (only if supported by hardware)
Description:	Defines the class of a PWM char	nnel

] ()

8.2.6 Pwm_ConfigType

[PWM111] [

Name:	Pwm_ConfigType	
. , , , , .	Structure	
runge.		The contents of the initialization data structure are hardware specific.
•	This is the type of driver.	data structure containing the initialization data for the PWM

1 ()

[PWM061] [Pwm_ConfigType is a type of data structure containing the initialization data for the PWM driver.

Mandatory parameters:

- Assigned HW channel
- Default value for period
- Default value for duty cycle
- Polarity (high or low)
- Idle state high or low
- Channel class:
 - Fixed period
 - Fixed period, shifted (if supported by hardware)
 - Variable period

Optional parameters (if supported by hardware):

- Channel phase shift
- Reference channel for phase shift
- Microcontroller specific channel properties

(BSW12293, BSW12378)

8.3 Function definitions

8.3.1 Pwm Init

[PWM095] [

Service name:	Pwm_Init	
Syntax:	void Pwm_Init(
	const Pwm_ConfigType* ConfigPtr	
	D	
Service ID[hex]:	0x00	
Sync/Async:	Synchronous	
Reentrancy:	Non Reentrant	
Parameters (in):	ConfigPtr Pointer to configuration set	
Parameters	None	
(inout):		
Parameters (out):	None	
Return value:	None	
Description:	Service for PWM initialization.	

] ()

[PWM007] [The function Pwm_Init shall initialize all internals variables and the used PWM structure of the microcontroller according to the parameters specified in ConfigPtr. | (BSW101, BSW12057)

[PWM062] [The function Pwm_Init shall only initialize the configured resources and shall not touch resources that are not configured in the configuration file.] (BSW12057, BSW12125)

[PWM009a] [The function Pwm_Init shall start all PWM channels with the configured default values.] (BSW12057)

If the duty cycle parameter equals:

- **[PWM009b]** [0% or 100%: Then the PWM output signal shall be in the state according to the configured polarity parameter] (BSW12057)
- **[PWM009c]** [>0% and <100%: Then the PWM output signal shall be modulated according to parameters period, duty cycle and configured polarity.] (BSW12057)

[PWM052] [The function Pwm_Init shall disable all notifications.] (BSW12057)

The reason is that the users of these notifications may not be ready. They can call Pwm_EnableNotification to start notifications.

[PWM093] [The users of the Pwm module shall not call the function Pwm_Init during a running operation.] ()

[PWM046] [If development error detection is enabled for the Pwm module, the function Pwm_Init shall raise development error PWM_E_PARAM_CONFIG if ConfigPtr is a null pointer.

Regarding error detection, the requirement PWM051a, PWM051b and PWM051c is applicable to the function Pwm_Init. J (BSW00323, BSW00386)

[PWM116] The Pwm module's environment shall not call any function of the Pwm module before having called Pwm Init. . | ()

[PWM118] [If development error detection is enabled, calling the routine Pwm_Init while the PWM driver and hardware are already initialized will cause a development error PWM_E_ALREADY_INITIALIZED. The desired functionality shall be left without any action.] ()

[PWM120a] [For pre-compile and link time configuration variants, a NULL pointer shall be passed to the initialization routine.] ()

[PWM120b] [In this case the check for this NULL pointer has to be omitted. | ()

[PWM121] [A re-initialization of the Pwm driver by executing the Pwm_Init() function requires a de-initialization before by executing a Pwm_DeInit(). | ()

8.3.2 Pwm_Delnit

[PWM096] [

Service name:	Pwm_Delnit
Syntax:	void Pwm_DeInit(void)
Service ID[hex]:	0x01

Sync/Async:	Synchronous
Reentrancy:	Non Reentrant
Parameters (in):	None
Parameters	None
(inout):	
Parameters (out):	None
Return value:	None
Description:	Service for PWM De-Initialization.

] ()

[PWM010] [The function Pwm_Delnit shall de-initialize the PWM module.] (BSW00336, BSW12163, BSW12381)

[PWM011] [The function Pwm_Delnit shall set the state of the PWM output signals to the idle state.] (BSW12163)

[PWM012] [The function Pwm_Delnit shall disable PWM interrupts and PWM signal edge notifications. | (BSW12163)

[PWM080a] [The function Pwm_Delnit shall be pre compile time configurable On/Off by the configuration parameter: PwmDelnitApi.] (BSW171)

[PWM080b] [The function Pwm_Delnit shall be configurable On/Off by the configuration parameter PwmDelnitApi {PWM_DE_INIT_API}.

Regarding error detection, the requirements <u>PWM117</u>, PWM051a, PWM051b and PWM051c are applicable to the function Pwm_Delnit.] (BSW171)

8.3.3 Pwm_SetDutyCycle

[PWM097] [

Service name:	Pwm_SetDutyCycle	
Syntax:	void Pwm_SetDutyCycle(Pwm_ChannelType ChannelNumber, uint16 DutyCycle)	
Service ID[hex]:	0x02	
Sync/Async:	Synchronous	
Reentrancy:	Reentrant for different chann	el numbers
Parameters (in):	ChannelNumber	Numeric identifier of the PWM
r arameters (m).	DutyCycle	Min=0x0000 Max=0x8000
Parameters (inout):	None	
Parameters (out):	None	
Return value:	None	
Description:	Service sets the duty cycle o	f the PWM channel.

+ ()

[PWM013] [The function Pwm_SetDutyCycle shall set the duty cycle of the PWM channel. | (BSW12295)

[PWM014] [When the requested duty cycle is either 0% or 100%, the function Pwm_SetDutyCycle shall set the PWM output state to either PWM_HIGH or PWM_LOW, with regard to both the configured polarity parameter and the requested duty cycle.

Thus for 0% requested Duty Cycle the output will be the inverse of the configured polarity parameter, and for 100% Duty Cycle the output will be equal to the configured polarity parameter.] ()

[PWM016] [The function Pwm_SetDutyCycle shall modulate the PWM output signal according to parameters period, duty cycle and configured polarity, when the duty cycle > 0 % and < 100%.] ()

[PWM017] [The function Pwm_SetDutyCycle shall update the duty cycle always at the end of the period if supported by the implementation and configured with PwmDutycycleUpdatedEndperiod.] (BSW12382)

Regarding format definition of duty cycle parameter, the requirement <u>PWM058</u> is applicable to the function Pwm_SetDutyCycle.

Regarding scaling definition of duty cycle parameter, the requirement <u>PWM059</u> is applicable to the function Pwm_SetDutyCycle.

[PWM018] [The driver shall forbid the spike on the PWM output signal. | ()

Regarding error detection, the requirements <u>PWM117</u>, <u>PWM047</u>, PWM051a, PWM051b and PWM051c are applicable to the function Pwm_SetDutyCycle.

[PWM082a] The function Pwm_SetDutyCycle shall be pre compile time configurable On/Off by the configuration parameter: PwmSetDutyCycle. .] (BSW171) **[PWM082b]** The function Pwm_SetDutyCycle shall be configurable On/Off by the configuration parameter: PwmSetDutyCycle {PWM_SET_DUTY_CYCLE_API}.] (BSW171)

8.3.4 Pwm SetPeriodAndDuty

[PWM098] [

Service name:	Pwm_SetPeriodAndDuty
Syntax:	<pre>void Pwm_SetPeriodAndDuty(Pwm_ChannelType ChannelNumber, Pwm_PeriodType Period, uint16 DutyCycle)</pre>
Service ID[hex]:	0x03

Sync/Async:	Synchronous	
Reentrancy:	Reentrant for different channel numbers	
	ChannelNumber	Numeric identifier of the PWM
Parameters (in):	Period	Period of the PWM signal
	DutyCycle	Min=0x0000 Max=0x8000
Parameters	None	
(inout):		
Parameters (out):	None	
Return value:	None	
Description:	Service sets the period and the duty cycle of a PWM channel	

1 ()

[PWM019] [The function Pwm_SetPeriodAndDuty shall set the period and the duty cycle of a PWM channel.] (BSW12297)

[PWM076] [The function Pwm_SetPeriodAndDuty shall update the period always at the end of the current period if supported by the implementation and configured with PwmPeriodUpdatedEndperiod.] ()

[PWM020] [When updating the PWM period and duty, the driver shall repress any spikes on the PWM output signal.] ()

The PWM duty cycle parameter is necessary to maintain the consistency between frequency and duty cycle. Refer to PWM059 and PWM059 to know the scaling and format definition of duty cycle parameter

Regarding error detection, the requirements <u>PWM117</u>, <u>PWM045</u>, <u>PWM047</u>, PWM051a, PWM051b and PWM051c are applicable to the function Pwm_SetPeriodAndDuty.

[PWM041] [The function Pwm_SetPeriodAndDuty shall allow changing the period only for the PWM channel declared as variable period type.] (BSW12389)

[PWM083a] [The function Pwm_SetPeriodAndDuty shall be pre compile time configurable On/Off by the configuration parameter: PwmSetPeriodAndDuty.] (BSW171)

[PWM083b] [The function Pwm_SetPeriodAndDuty shall be configurable On/Off by the configuration parameter: PwmSetPeriodAndDuty {PWM SET PERIOD AND DUTY API}.| (BSW171)

[PWM150] [If the period is set to zero the setting of the duty-cycle is not relevant. In this case the output shall be zero (zero percent duty-cycle).] ()

8.3.5 Pwm_SetOutputToldle

[PWM0991 [

Service name:	Pwm_SetOutputToIdle	
Syntax:	void Pwm_SetOutputToIdle(
	Pwm_ChannelType ChannelNumber	
)	
Service ID[hex]:	0x04	
Sync/Async:	Synchronous	
Reentrancy:	Reentrant for different channel numbers	
Parameters (in):	ChannelNumber Numeric identifier of the PWM	
Parameters	None	
(inout):		
Parameters (out):	None	
Return value:	None	
Description:	Service sets the PWM output to the configured Idle state.	

1 ()

[PWM021] [The function Pwm_SetOutputToldle shall set immediately the PWM output to the configured Idle state.] (BSW12358)

Regarding error detection, the requirements <u>PWM117</u>, <u>PWM047</u>, PWM051a, PWM051b and PWM051c are applicable to the function Pwm_SetOutputToldle.

[PWM084a] [The function Pwm_SetOutputToldle shall be pre compile time configurable On/Off by the configuration parameter: PwmSetOutputToldle.] (BSW171)

[PWM084b] [The function Pwm_SetOutputToldle shall be configurable On/Off by the configuration parameter: PwmSetOutputToldle {PWM_SET_OUTPUT_TO_IDLE_API}.] (BSW171)

[PWM086a] [After the call of the function Pwm_SetOutputToldle, variable period type channels shall be reactivated using the Api Pwm_SetPeriodAndDuty() to activate the PWM channel with the new passed period.] ()

[PWM086b] [After the call of the function Pwm_SetOutputToldle, channels shall be reactivated using the Api Pwm_SetDutyCycle() to activate the PWM channel with the old period. | ()

[PWM119] [After the call of the function Pwm_SetOutputToldle, fixed period type channels shall be reactivated using only the API Pwm_SetDutyCycle() to activate the PWM channel with the old period.] ()

8.3.6 Pwm_GetOutputState

[PWM100] [

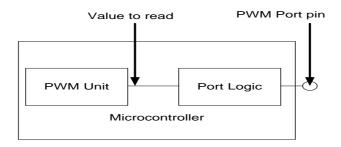

Service name:	Pwm_GetOutputState
Syntax:	Pwm_OutputStateType Pwm_GetOutputState(
	Pwm_ChannelType ChannelNumber

)		
Service ID[hex]:	0x05		
Sync/Async:	Synchronous		
Reentrancy:	Reentrant for different channel numbers		
Parameters (in):	ChannelNumber	Numeric identifier of the PWM	
Parameters (inout):	None		
Parameters (out):	None		
Return value:		PWM_HIGH The PWM output state is high PWM_LOW The PWM output state is low	
Description:	Service to read the internal state of the PWM output signal.		

 \perp ()

[PWM022] The function Pwm_GetOutputState shall read the internal state of the PWM output signal and return it as defined in the diagram below

Regarding error detection, the requirements <u>PWM117</u>, <u>PWM047</u>, PWM051a, PWM051b and PWM051c are applicable to the function Pwm_GetOutputState.] (BSW12385)

[PWM085a] [The function Pwm_GetOutputState shall be pre compile time configurable On/Off using the configuration parameter: PwmGetOutputState.] (BSW171)

[PWM085b] [The function Pwm_GetOutputState shall be configurable On/Off by the configuration parameter: PwmGetOutputState {PWM_GET_OUTPUT_STATE_API}.

Due to real time constraint and setting of the PWM channel (project dependant), the output state can be modified just after the call of the service Pwm_GetOutputState. J (BSW171)

8.3.7 Pwm_DisableNotification

[PWM101] [

Service name:	Pwm_DisableNotification		
Syntax:	void Pwm_DisableNotification(
	Pwm_ChannelType ChannelNumber		

Service ID[hex]:	0x06		
Sync/Async:	Synchronous		
Reentrancy:	Reentrant for different channel numbers		
Parameters (in):	ChannelNumber	Numeric identifier of the PWM	
Parameters	None		
(inout):			
Parameters (out):	None		
Return value:	None		
Description:	Service to disable the PWM signal edge notification.		

1 ()

[PWM023] [The function Pwm_DisableNotification shall disable the PWM signal edge notification.] (BSW12378, BSW12299)

[PWM112a] [The function Pwm_DisableNotification shall be pre compile time configurable On/Off using the configuration parameter: PwmNotificationSupported.]

[PWM112b] [The function Pwm_DisableNotification shall be configurable On/Off by the configuration parameter: PwmNotificationSupported {PWM_NOTIFICATION_SUPPORTED}.

Regarding error detection, the requirements <u>PWM117</u>, <u>PWM047</u>, PWM051a, PWM051b and PWM051c are applicable to the function Pwm_DisableNotification.]

8.3.8 Pwm_EnableNotification

[PWM102] [

Service name:	Pwm_EnableNotification				
Syntax:	void Pwm_EnableNotification(
	Pwm_ChannelType ChannelNumber,				
	Pwm_EdgeNotificationType Notification				
Service ID[hex]:	0x07				
Sync/Async:	Synchronous				
Reentrancy:	Reentrant for different channel numbers				
	ChannelNumber	Numeric identifier of the PWM			
Parameters (in):	Notification	Type of PWM_RISING_EDGE PWM_FALLING_EDGE	notification or or		
Parameters	PWM_BOTH_EDGES None				
(inout):					
Parameters (out):	None				
Return value:	None				
Description:	Service to enable the PWN parameter.	I signal edge notification according to	notification		

[PWM024] [The function Pwm_EnableNotification shall enable the PWM signal edge notification according to notification parameter.] (BSW12378, BSW12299)

[PWM081] [The function Pwm_EnableNotification shall cancel pending interrupts.] ()

[PWM113a] [The function Pwm_EnableNotification shall be pre compile time configurable On/Off using the configuration parameter: PwmNotificationSupported.]

[PWM113b] [The function Pwm_EnableNotification shall be configurable On/Off by the configuration parameter: PwmNotificationSupported {PWM NOTIFICATION SUPPORTED}.

Regarding error detection, the requirements <u>PWM117</u>, <u>PWM047</u>, PWM051a, PWM051b and PWM051c are applicable to the function Pwm_EnableNotification.] ()

8.3.9 Pwm_GetVersionInfo

[PWM103] [

Service name:	Pwm_GetVersionInfo
Syntax:	void Pwm_GetVersionInfo(
	Std_VersionInfoType* versioninfo
Service ID[hex]:	0x08
Sync/Async:	Synchronous
Reentrancy:	Reentrant
Parameters (in):	None
Parameters	None
(inout):	
Parameters (out):	versioninfo Pointer to where to store the version information of this module.
Return value:	None
Description:	Service returns the version information of this module.

] ()

[PWM068] [The function Pwm_GetVersionInfo shall return the version information of this module. The version information includes:

- Module Id
- Vendor Id
- Vendor specific version numbers (BSW00407).

] (BSW00407)

[PWM069a] [The function Pwm_GetVersionInfo shall be pre compile time configurable On/Off using the configuration parameter: PwmVersionInfoApi.] (BSW00407)

[PWM069b] [The function Pwm_GetVersionInfo shall be configurable On/Off by the configuration parameter: PwmVersionInfoApi {PWM_VERSION_INFO_API}.] (BSW00407)

[PWM114] [If source code for caller and callee of Pwm_GetVersionInfo is available, the Pwm module should realize Pwm_GetVersionInfo as a macro, defined in the module's header file.

Regarding error detection, the requirement PWM151 is applicable to the function Pwm_ GetVersionInfo.] ()

8.4 Callback notifications

Since the PWM Driver is a module on the lowest architectural layer it doesn't provide any call-back functions for lower layer modules.

8.5 Scheduled functions

The PWM driver offers only synchronous services and therefore doesn't need any scheduled functions.

8.6 Expected Interfaces

In this chapter all interfaces required from other modules are listed.

8.6.1 Mandatory Interfaces

This chapter defines all interfaces which are required to fulfill the core functionality of the module.

As this module is part of the MCAL layer, it access directly to the microcontroller registers and therefore doesn't need any lower interfaces.

8.6.2 Optional Interfaces

This chapter defines all interfaces which are required to fulfill an optional functionality of the module.

[PWM104] [

API function	Description		
Dem_ReportErrorStatus	Queues the reported events from the BSW modules (API is only used by		
	BSW modules). The interface has an asynchronous behavior, because		
	the processing of the event is done within the Dem main function.		

pot_report_from pervise to report development entois.	Det_ReportError	Service to report development errors.
---	-----------------	---------------------------------------

 \perp ()

8.6.3 Configurable interfaces

In this chapter all interfaces are listed where the target function could be configured. The target function is usually a call-back function. The names of these kinds of interfaces are not fixed because they are configurable.

[PWM105] [

Service name:	Pwm_Notification_<#Channel>				
Syntax:	void Pwm_Notification_<#Channel>(
)				
Sync/Async:	Synchronous				
Reentrancy:	PWM user implementation dependant				
Parameters (in):	None				
Parameters	None				
(inout):					
Parameters (out):	None				
Return value:	None				
Description:	The Pwm module shall call the function Pwm_Notification_<#Channel>accordingly to the last call of Pwm_EnableNotification for channel <#Channel>.				

 \perp ()

[PWM025] [The Pwm module shall call the function Pwm_Notification_<#Channel> accordingly to the last call of Pwm_EnableNotification and Pwm_DisableNotification for channel <#Channel>.| (BSW157)

[PWM026] [The Pwm module shall reset the interrupt flag associated to the notification Pwm_Notification_<#Channel>] (BSW12129)

[PWM115a] The module the functionality Pwm shall provide of Pwm EnableNotification only when the configuration parameter PwmNotificationSupported is ON. | ()

[PWM115b] The Pwm module shall provide the functionality of Pwm DisableNotification only when the configuration parameter PwmNotificationSupported is ON. | ()

[PWM115c] [The Pwm module shall reset the interrupt flag associated to the notification only when the configuration parameter PwmNotificationSupported is ON. | ()

8.7 API parameter checking

[PWM051a] [If development error detection for the Pwm module is enabled, and a development error occurs, then the corresponding PWM function shall report the error to the Development Error Tracer. | (BSW00323, BSW00386)

[PWM051b] [If development error detection for the Pwm module is enabled, and a development error occurs, then the corresponding PWM function shall skip the desired functionality in order to avoid any corruptions of data or hardware registers leaving the function without any actions.] (BSW00323, BSW00386)

[PWM051c] [If development error detection for the Pwm module is enabled, and a development error occurs, then the corresponding PWM function shall return PWM LOW for the function Pwm GetOutputState. | (BSW00323, BSW00386)

[PWM117] [If development error detection for the Pwm module is enabled: if any function (except Pwm_Init) is called before Pwm_Init has been called, the called function shall raise development error PWM_E_UNINIT.] (BSW00406, BSW00323, BSW00386)

[PWM045] [If development error detection for the Pwm module is enabled: The API Pwm_SetPeriodAndDuty() shall check if the given PWM channel is of the channel class type PWM_VARIABLE_PERIOD. If this is not the case the development error PWM_E_PERIOD_UNCHANGEABLE shall be called.] (BSW00323, BSW00386)

[PWM047] [If development error detection for the Pwm module is enabled: the PWM functions shall check the parameter ChannelNumber and raise development error PWM_E_PARAM_CHANNEL if the parameter ChannelNumber is invalid.] (BSW00323, BSW00386)

10 Configuration specification

In general, this chapter defines configuration parameters and their clustering into containers. In order to support the specification Chapter 10.1 describes fundamentals. It also specifies a template (table) you shall use for the parameter specification. We intend to leave Chapter 10.1 in the specification to guarantee comprehension.

Chapter 10.2 specifies the structure (containers) and the parameters of the module PWM Driver.

Chapter 10.3 specifies published information of the module PWM Driver.

10.1 How to read this chapter

In addition to this section, it is highly recommended to read the documents:

- AUTOSAR Layered Software Architecture [1]
- AUTOSAR ECU Configuration Specification [6]
 This document describes the AUTOSAR configuration methodology and the AUTOSAR configuration metamodel in detail.

The following is only a short survey of the topic and it will not replace the ECU Configuration Specification document.

10.1.1 Configuration and configuration parameters

Configuration parameters define the variability of the generic part(s) of an implementation of a module. This means that only generic or configurable module implementation can be adapted to the environment (software/hardware) in use during system and/or ECU configuration.

The configuration of parameters can be achieved at different times during the software process: before compile time, before link time or after build time. In the following, the term "configuration class" (of a parameter) shall be used in order to refer to a specific configuration point in time.

10.1.2 Containers

Containers structure the set of configuration parameters. This means:

- all configuration parameters are kept in containers.
- (sub-) containers can reference (sub-) containers. It is possible to assign a multiplicity to these references. The multiplicity then defines the possible number of instances of the contained parameters.

10.1.3 Specification template for configuration parameters

The following tables consist of three sections:

- the general section
- the configuration parameter section
- the section of included/referenced containers

Pre-compile time

 specifies whether the configuration parameter shall be of configuration class *Pre-compile time* or not

Label	Description
х	The configuration parameter shall be of configuration class <i>Pre-compile time</i> .
	The configuration parameter shall never be of configuration class <i>Pre-compile time</i> .

Link time

 specifies whether the configuration parameter shall be of configuration class *Link time* or not

Label	Description
Х	The configuration parameter shall be of configuration class <i>Link time</i> .
	The configuration parameter shall never be of configuration class <i>Link time</i> .

Post Build

 specifies whether the configuration parameter shall be of configuration class Post Build or not

Label	Description
х	The configuration parameter shall be of configuration class <i>Post Build</i> and no specific implementation is required.
L	Loadable - the configuration parameter shall be of configuration class Post Build and only one configuration parameter set resides in the ECU.
М	Multiple - the configuration parameter shall be of configuration class Post Build and is selected out of a set of multiple parameters by passing a dedicated pointer to the init function of the module.
	The configuration parameter shall never be of configuration class <i>Post Build</i> .

10.2 Containers and configuration parameters

The following chapters summarize all configuration parameters. The detailed meanings of the parameters describe Chapters <u>Functional specification</u> and Chapter <u>API specification</u>.

10.2.1 Variants

[PWM079] [VARIANT-PRE-COMPILE (Pre Compile) is limited to pre-compile configuration parameters only.] ()

[PWM077] [VARIANT-POST-BUILD includes a mix of pre-compile, link time and post build configuration parameters.] ()

10.3 Published Information

[PWM152] [The standardized common published parameters as required by BSW00402 in the General Requirements on Basic Software Modules [3] shall be published within the header file of this module and need to be provided in the BSW Module Description. The according module abbreviation can be found in the List of Basic Software Modules [8].] ()

Additional module-specific published parameters are listed below if applicable.

11 Changes

11.1 Deleted SWS Items

SWS Item	Rationale
PWM028	Take in account the new template for configuration
PWM030	Take in account the new template for configuration and bug #5523
PWM042	Correction of bug #4007
PWM036	Remove time resolution from the published parameter
PWM055	Remove (due to SRS publication)
PWM056	Remove (due to SRS publication)
PWM057	Remove (due to SRS publication)
PWM015	Review comments of SVDO
PWM048	Correction
PWM031	Removal of Callback requirements
PWM032	Removal of Callback requirements
PWM033	Removal of Callback requirements
PWM040	Implementation is HW dependent

11.2 Replaced SWS Items

SWS Iter Release 1	n of	replaced by SWS Item	Rationale

11.3 Changed SWS Items

SWS Item	Rationale
PWM002	Take in account the new template sentence to describe requirement
PWM003	Take in account the new template sentence to describe requirement
PWM004	Take in account the new template for configuration
PWM015	Correct
PWM027	Take in account the new template for configuration and bug #4055
PWM029	Take in account the new template
PWM054	Implementation
PWM022	Correction
PWM021	Remove abstraction level and correct
PWM009	Remove abstraction level
PWM025	Clarify the name of the notification
PWM011	Remove abstraction level
PWM014	Remove abstraction level
PWM015	Remove abstraction level
PWM016	Remove abstraction level
PWM051	Remove abstraction level
PWM009	Review comments of SVDO
PWM014	Review comments of SVDO
PWM086	Adapted reactivation concept for variable period type PWM channels

11.4 Added SWS Items

PWM065	Take in account the new template sentence to describe requirement							
PWM066	Take in account the new template sentence to describe requirement							
PWM067	Take in account the new template sentence to describe requirement							
PWM068	Implementation of Pwm_GetVersionInfo							
PWM069	mplementation of Pwm_GetVersionInfo							
<u>PWM070</u>	Take in account configuration of time							
PWM073	Take in account new SRS of Autosar Srs_General BSW00384							
PWM074	Take in account new SRS of Autosar_Srs_General BSW00384							
<u>PWM075</u>	Take in account new SRS of Autosar_Srs_General BSW00381, BSW00412, BSW00435, BSW00436							
<u>PWM076</u>								
<u>PWM077</u>	Variant definition							
<u>PWM078</u>	Add this requirement to comply with chapter Error notification of the SWS template							
PWM079	Add PC variant							
PWM080	Configuration of optional API service "Pwm_DeInit()"							
PWM081	Cancel pending interrupts							
PWM082	Configuration of optional API service "Pwm_SetDutyCycle()"							
PWM083	Configuration of optional API service "Pwm_SetPeriodAndDuty()"							
PWM084	Configuration of optional API service "Pwm_SetOutputToIdle()"							
PWM085	Configuration of optional API service "Pwm_GetOutputState()"							
PWM118	Added DET error PWM_E_ALREADY_INITIALIZED							
PWM119	Extend reactivation concept for fixed period type PWM channels							
PWM120	NULL pointer check of configuration structure in initialization function							
PWM121	Re-initialization of MCAL modules							

12 Changes during SWS Improvements by Technical Office

12.1 Deleted SWS Items

SWS Item	Rationale
PWM060	No requirement, just information; ID removed but text left in
PWM073	No requirement, just information; ID removed but text left in
PWM074	No requirement, just information; ID removed but text left in
PWM035	Requirement and text removed as this is covered by the API definition in the table PWM105

12.2 Replaced SWS Items

SWS Item o Release 1	f replaced by SWS Item	Rationale
PWM034	<u>PWM088</u> , <u>PWM089</u>	Made requirement atomic
PWM044	PWM116, PWM117	Made requirement atomic

12.3 Changed SWS Items

Many requirements have been changed to improve understandability without changing the technical contents.

12.4 Added SWS Items

SWS Item	Rationale
PWM086	Caveat for Pwm_SetOutputToldle.
PWM093	Caveat for Pwm_Init
PWM094	UML Model linking of imported types
PWM095	UML Model linking of Pwm_Init
PWM096	UML Model linking of Pwm_DeInit
<u>PWM097</u>	UML Model linking of Pwm_SetDutyCycle
<u>PWM098</u>	UML Model linking of Pwm_SetPeriodAndDuty
<u>PWM099</u>	UML Model linking of Pwm_SetOutputToldle
<u>PWM100</u>	UML Model linking of Pwm_GetOutputState
<u>PWM101</u>	UML Model linking of Pwm_DisableNotification
<u>PWM102</u>	UML Model linking of Pwm_EnableNotification
<u>PWM103</u>	UML Model linking of Pwm_GetversionInfo
<u>PWM104</u>	UML Model linking of the optional interfaces
<u>PWM105</u>	UML Model linking of Pwm_Notification_<#Channel>
<u>PWM106</u>	UML Model linking of Pwm_ChannelType
<u>PWM107</u>	UML Model linking of Pwm_PeriodType
<u>PWM108</u>	UML Model linking of Pwm_OutputStateType
<u>PWM109</u>	UML Model linking of Pwm_EdgeNotificationType
<u>PWM110</u>	UML Model linking of Pwm_ChannelClassType
<u>PWM111</u>	UML Model linking of Pwm_ConfigType
<u>PWM112</u>	Gave explicit ID to note out of Pwm_DisableNotification
<u>PWM113</u>	Gave explicit ID to note out of Pwm_EnableNotificaiton
<u>PWM114</u>	Gave an ID to a suggestion out of Pwm_GetVersionInfo

	Gave ar	ı ID	to	the	dependency	of	the	callbacks	on	the	config	parameter
	PwmNotificationSupported											

13 Not applicable requirements

[PWM153] [These requirements are not applicable to this specification.] (BSW159, BSW167, BSW170, BSW00419, BSW00383, BSW00375, BSW00416, BSW168, BSW00423, BSW00424, BSW00425, BSW00426, BSW00427, BSW00428, BSW00429, BSW00431, BSW00432, BSW00433, BSW00434, BSW00417, BSW161, BSW162, BSW005, BSW00415, BSW164, BSW00325, BSW00326, BSW00342, BSW160, BSW007, BSW00300, BSW00413, BSW00347, BSW00305, BSW00307, BSW00310, BSW00373, BSW00327, BSW00335, BSW00350, BSW00408, BSW00410, BSW00348, BSW00353, BSW00361, BSW00301, BSW00302, BSW00328, BSW00312, BSW00309, BSW00377, BSW00377, BSW00304, BSW00355, BSW00378, BSW00306, BSW00308, BSW00309, BSW00371, BSW00358, BSW00414, BSW00376, BSW00359, BSW00360, BSW00329, BSW00330, BSW00331, BSW009, BSW00401, BSW172, BSW010, BSW00333, BSW003, BSW00341, BSW00334, BSW12267, BSW12461, BSW12462, BSW12463, BSW12068, BSW12069, BSW12169, BSW12075, BSW12064, BSW12067, BSW12077, BSW12078, BSW12092, BSW12265, BSW12379)
